

FEATURES

- Potassium – 2800 mg/tube
- Magnesium – 400 mg/tube
- Calcium – 600 mg/tube
- Highly Palatable

"IT MAKES A WORLD OF DIFFERENCE"

VITAMINS AND MINERALS FOR LIVESTOCK

Electro Aid Paste

ELECTROLYTE REPLACER

A Nutritional Aid for Mature Horses to Replace Electrolytes Lost in Sweat

For Animal Treatment Only. This product does not contain restricted animal material.

Electro Aid Paste

ELECTROLYTE REPLACER

SPECIAL INGREDIENTS

DAC® ELECTRO AID PASTE provides a balanced profile of electrolytes for all mature horses. Electrolytes are electrically charged salts or 'ions' such as sodium, chloride, potassium, magnesium and calcium which are dissolved and carried in the blood and cell fluids. As salts dissolve in the blood and tissues of the body, electrolytes assist in preserving the correct balance of fluids both inside and outside the cells. Electrolytes also function in the generation of nerve impulses, contraction and relaxation of muscles, the beating of the heart and processing of wastes, in fact electrolytes are involved in virtually every function of the body. An electrolyte imbalance may cause such complications as dehydration, muscle fatigue, reduced stamina, overheating, and tying-up. It is therefore essential that electrolyte supplementation occurs as part of your daily nutritional management practices.

Sodium and Chloride: Common salt (NaCl), which is composed of two ions, sodium (Na+) and chloride (Cl-). These are the major electrolytes of the body.

Potassium: One of potassium's major roles is to maintain and ensure correct cellular osmotic pressure which affects the sensitivity of nerves and muscles to impulses. Horses suffering from a lack of potassium are prone to fatigue, muscle weakness, exercise intolerance, tying-up and decreased water intake.

Magnesium: Magnesium plays a critical role as a co-factor in over 300 enzymatic reactions within the body. Magnesium is also required for muscle function.

Calcium: Deficiencies of calcium in its ionic form may lead to muscle weakness and conditions such as tying-up

FEEDING DIRECTIONS

DAC® ELECTRO AID PASTE can be fed to all classes of mature horses. The intake of DAC® ELECTRO AID PASTE is based on work intensity and the amount of sweat lost from the body. DAC® ELECTRO AID PASTE can be fed with either fortified or unfortified grains. Fortified grains contain added vitamins and minerals. Feed DAC® ELECTRO AID PASTE at the following rates:

Use 1 to 2 tubes after competition or training to aid in recuperation.

GUARANTEED ANALYSIS

(Per Tube - 40 Grams)

Salt (min)	11% (4,400 mg)
Salt (max)	12% (4,800 mg)
Potassium (min)	7% (2,800 mg)
Calcium (min)	1.5% (600 mg)
Glycine (min)	1% (400 mg)
Magnesium (min)	1% (400 mg)
Phosphorus (min)	0.5% (200 mg)

INGREDIENTS

Glycerin, water, potassium chloride, salt, glucose polymer, calcium carbonate, monosodium phosphate, magnesium oxide, glycine guar gum, citric acid, sodium saccharin, apple flavoring, sodium copper chlorophyllin, methylparaben.
